

Candidate-to-Offer Camp

Your guide to Coach Rose Nylund's Job Coach: from profile to offer, one step at a time

scaruana33-code.github.io/mock-interviews2

RECORDING SCRIPT · Slide 1 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

[Smile. Pause one beat before you start.]

Hi, I'm Stephen Caruana, and welcome to the Candidate-to-Offer Camp.

If you've ever applied to dozens of jobs and had no idea what was working, this is for you. I built Coach Rose Nylund's Job Coach to stay with you from the first application all the way to the offer.

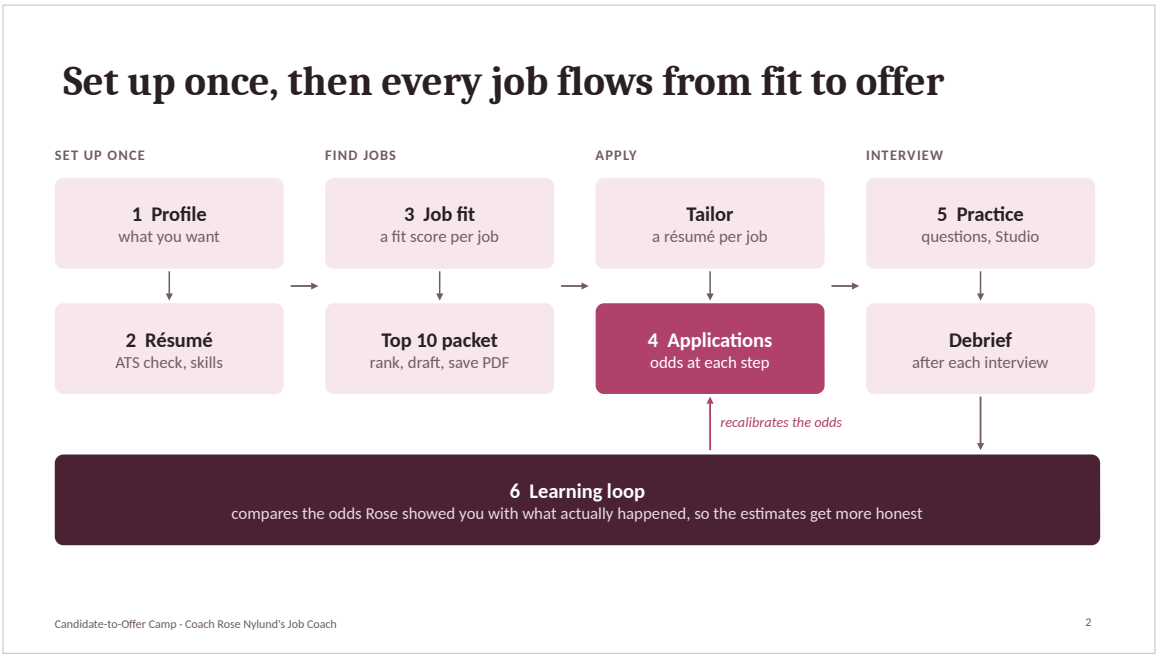

It's free, it runs in your web browser, and there's no account to set up. Everything starts from one front door page, and I'll show you that first.

[Pause.]

Over the next twenty minutes or so, I'll walk you through every screen. You'll see a made-up candidate named Jordan Lee applying to fictional companies, so you can see how a real search looks without anyone's personal details.

By the end, you'll know exactly where to start, and what to do each week.

[Advance.]

RECORDING SCRIPT · Slide 2 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Here's the big picture, and it's simpler than it looks.

[Point to the left column.] First, you set up once. Your Profile tells Rose what you want, and your Résumé gives her the facts about you.

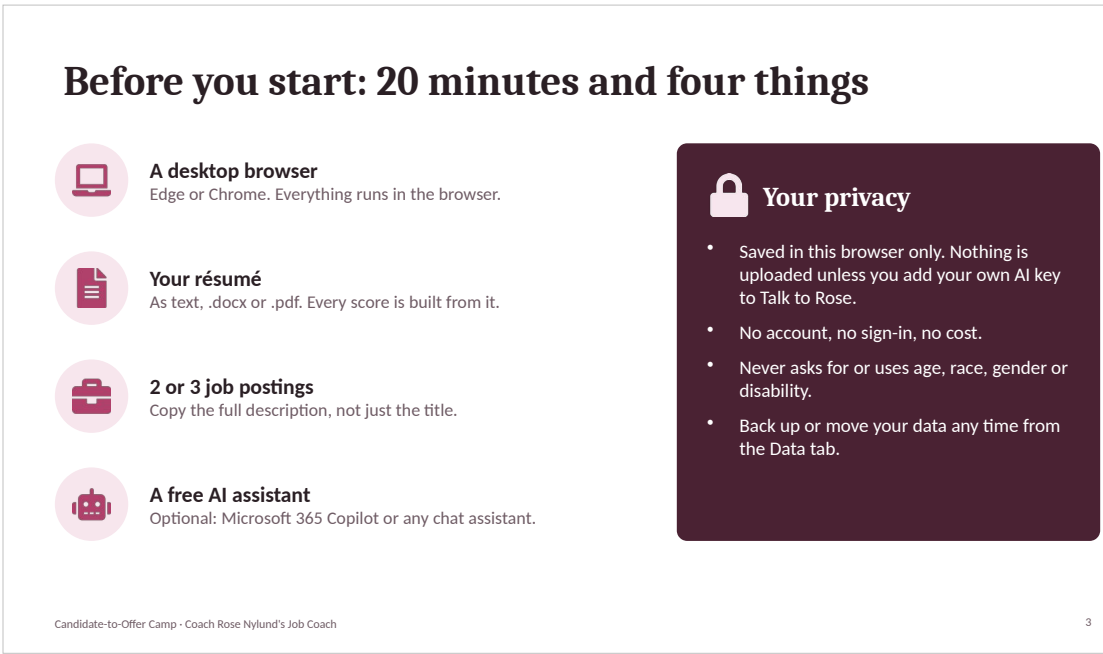

[Point to the second column.] Next, you find jobs. Add them one at a time in Job fit, or ten at a time with the Top 10 packet.

[Point to the third column.] When you apply, Tailor shapes your résumé for that posting. Then the Applications tab tracks the job and shows your odds at every next step.

[Point to the fourth column.] When interviews come, you Practice, and afterwards you log a quick Debrief.

[Point to the bottom band.] And here's the part I'm proudest of. The Learning loop compares the odds Rose showed you with what actually happened, and feeds that back. So the longer you use it, the more honest it gets.

[Advance.]

RECORDING SCRIPT · Slide 3 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Before you start, you need about twenty minutes and four things.

[Point down the list.] A desktop browser, Edge or Chrome. A phone works, but it's cramped.

Your résumé, as text, a Word file or a PDF. Every score in the app is built from it.

Two or three job postings you're interested in. Copy the full description, not just the title.

And optionally, a free AI assistant, like Microsoft 365 Copilot, for a few copy-and-paste steps.

[Point to the dark card.] Now, privacy. This matters to me. Everything you type stays in your browser, on your device. Nothing is uploaded, unless you choose to add your own AI key to Talk to Rose, which I'll explain later. There's no sign-in and no cost. And the app never asks for, or uses, your age, race, gender or disability.

[Pause.] Let's get started.

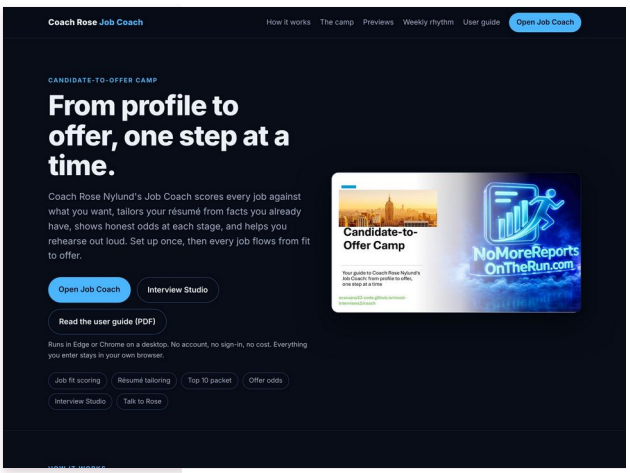

[Advance.]

Start at the front door

One address for everything: the Job Coach, the Interview Studio and this guide.

1. Go to scaruana33-code.github.io/mock-interviews2
2. Press Open Job Coach to start your camp
3. Press Interview Studio to rehearse answers
4. Press Read the user guide (PDF) any time

Done when: the front door is bookmarked in Edge or Chrome.

RECORDING SCRIPT · Slide 4 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

This is the front door, and it's the only address you need to remember.

[Point to the address in the browser bar.] It's scaruana33-code dot github dot io, slash mock-interviews2. Bookmark it.

[Point to the blue button.] Open Job Coach takes you into the camp, where we'll spend most of our time today.

[Point to the second button.] Interview Studio takes you straight to rehearsing answers out loud.

[Point to the third button.] And Read the user guide opens this same guide as a PDF, any time you need a refresher.

[Pause.] Further down the page, you'll find how it all fits together, previews of every screen, and the weekly rhythm. Let's open the Job Coach and start with step one.

[Advance.]

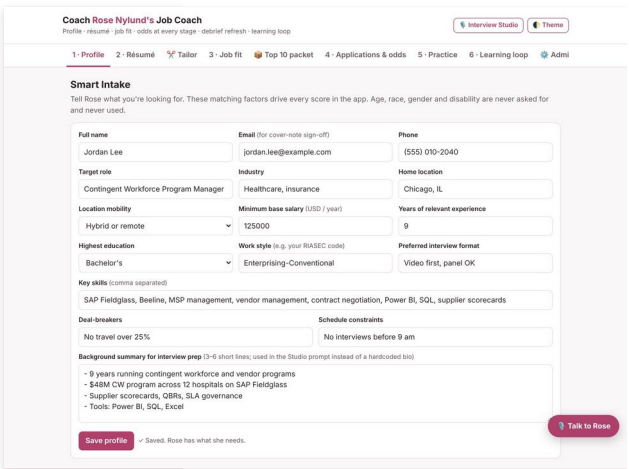

1

Profile: tell Rose what you want

Every score in the app is weighed against your profile.

1. Open the 1 · Profile tab
2. Fill in target role, location mobility, minimum salary and key skills
3. Add a 3 to 6 line background summary for interview prep
4. Press Save profile

Done when: role, mobility, salary floor and skills are saved.

RECORDING SCRIPT · Slide 5 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Step one is your Profile. Rose calls it Smart Intake.

This is where you tell her what you're looking for, and every score in the app is weighed against it.

[Point to the screenshot.] Fill in your target role and industry. Where you live, and whether you want remote, hybrid, on-site, or you're open to relocating. Your minimum salary. Your years of experience, education, and key skills, separated by commas.

Your name, email and phone are only used to sign your cover notes, and they never leave your device.

[Point to the large box near the bottom.] The background summary is three to six short lines about you. It becomes your bio in every interview-prep prompt.

Then press Save profile.

[Pause.] Quick tip: if you'd rather not type all this, the Admin tab can import your résumé and fill in the basics for you. I'll show you that near the end.

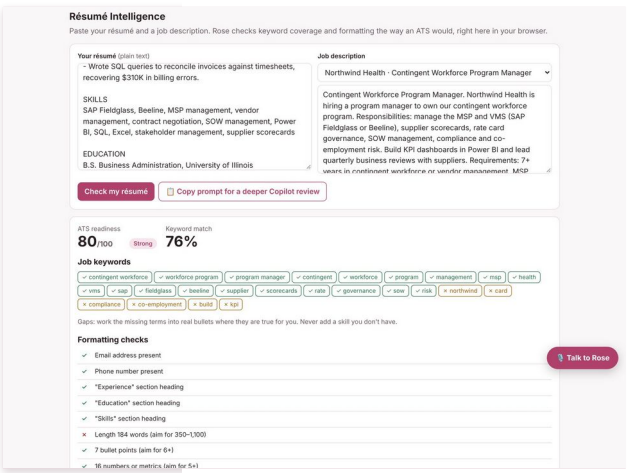

[Advance.]

2 Résumé check: see what an ATS sees

Find the keywords a posting wants that your résumé doesn't say.

1. Paste your résumé as plain text
2. Pick a saved job or paste a job description
3. Press Check my résumé
4. Fix formatting items; add missing keywords only if true

Done when: every formatting check you can fix shows a green tick.

RECORDING SCRIPT · Slide 6 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Step two is the Résumé check.

Paste your résumé on the left. On the right, pick a saved job or paste a job description. Then press Check my résumé.

[Point to the score.] Rose reads it the way an applicant tracking system would. You get an ATS readiness score out of a hundred, and the share of the posting's keywords you already have.

[Point to the keyword chips.] Green ticks are keywords you have. Orange crosses are ones you don't.

[Point to the checklist.] Below that are formatting checks: your contact details, standard section headings, a sensible length, enough bullets, enough numbers, and no tables or boxes that confuse these systems.

[Slow down.] And here's the one rule that matters most. Only add a missing keyword if it's genuinely true for you. Never claim a skill you don't have.

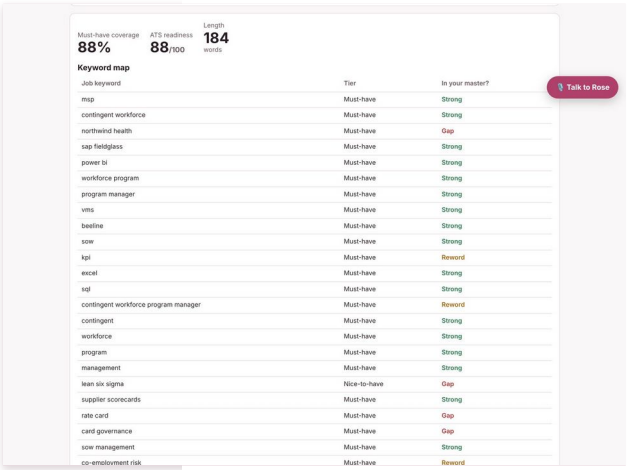

[Advance.]

Tailor: aim your résumé at one job

Your master résumé is the only source of facts.
Gaps become questions, never claims.

1. Load your master résumé (saved on this device)
2. Pick a job and press Tailor & score
3. Read the keyword map: Strong, Reword or Gap
4. Copy the AI prompt, paste the result back, press Check it

Done when: gap questions are answered and the final version passes Check it.

RECORDING SCRIPT · Slide 7 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Next is Tailor, and this is where your résumé gets aimed at one specific job, without inventing anything.

Load your master résumé once, and it's saved on your device. Pick a job, and press Tailor and score.

[Point to the keyword map.] Every keyword in the posting gets a label. Strong means it's already in your résumé. Reword means your experience supports it, just in different words. And Gap means it isn't shown.

[Pause.] Gaps become questions for you, never new claims. If you really do have that experience, add it to your master résumé and run it again. If you don't, leave it out.

You also get a reordered draft with your best-matching bullets first, and a prompt you can paste into a free AI to smooth the wording. Paste the result back and press Check it. Rose fact-checks it against your master résumé, so nothing slips in that isn't true.

[Advance.]

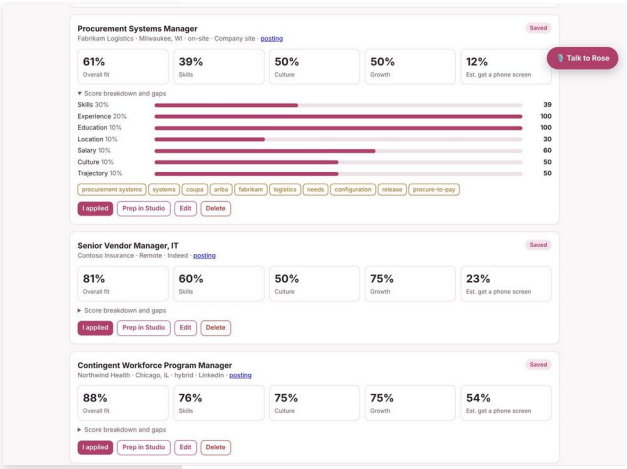

3

Job fit: score every job you're considering

Skills 30%, experience 20%, and education, location, salary, culture and trajectory 10% each.

1. Add company, title, location, salary and the full description
2. Slide culture fit and trajectory to your own read, 1 to 5
3. Tick the box if you have a referral, then Save job
4. Open Score breakdown and gaps on your top jobs

Done when: each job you're considering is saved and you've noted its gaps.

RECORDING SCRIPT · Slide 8 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Step three is Job fit. This is your list of jobs you're considering.

To add one, fill in the company, title, location, salary and where you found it, and paste the full job description. Slide culture fit and career trajectory to your own gut read, from one to five. And tick the box if you have a referral.

[Point to a card.] Each job gets a Job Fit Card. The big number is your overall fit. Skills count thirty percent, experience twenty, and education, location, salary, culture and trajectory ten percent each.

[Point to the last box on the card.] This one is your estimated chance of getting a phone screen if you apply.

Open Score breakdown and gaps to see exactly where a job is strong or weak for you.

And when you send an application, press I applied. The job moves straight to your Applications tab.

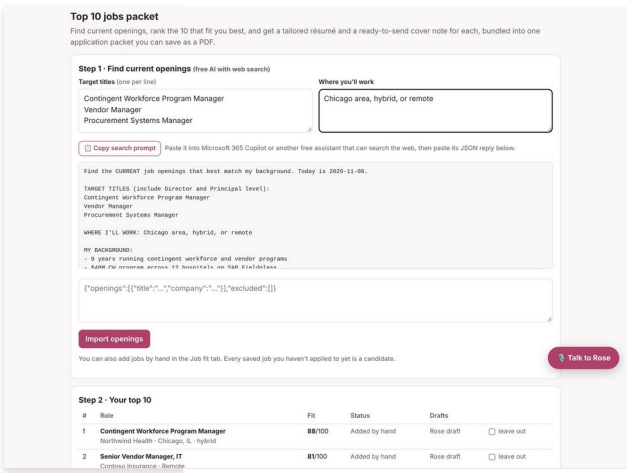

[Advance.]

Top 10 packet: your best ten, ready to send

Find openings, rank the ten that fit best, and get a tailored résumé and cover note for each.

1. Copy the search prompt into an AI that can search the web
2. Paste its reply and press Import openings
3. Untick or leave out roles you don't want
4. Open the printable packet and save as PDF

Done when: your top 10 is real roles and the packet and tracker are saved.

RECORDING SCRIPT · Slide 9 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

The Top 10 packet does a week's worth of searching in one sitting.

[Point to step one.] Enter the job titles you're targeting and where you want to work. Press Copy search prompt, and paste it into an AI assistant that can search the web, like Microsoft 365 Copilot. Then paste its reply back and press Import openings.

[Point to the table.] Rose ranks the ten jobs that fit you best. If there's one you don't want, just tick leave out.

For every job, she drafts a reordered résumé and a cover note, using only facts from your master résumé. You can polish those with a free AI if you like.

[Pause.] Then open the printable packet and save it as a PDF, or download a spreadsheet tracker for Excel. Ten tailored applications, ready to send.

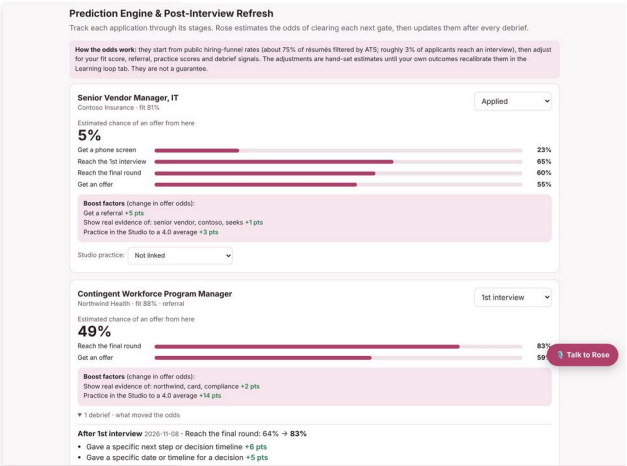

[Advance.]

4 Applications & odds: know where you stand

Rose estimates your chance of clearing each next step, and updates it as you go.

1. Press I applied on a job to move it here
2. Change the stage as things progress
3. Read the offer odds and the bar for each next step
4. Use Boost factors to see what would raise your odds

Done when: every application shows its current stage.

RECORDING SCRIPT · Slide 10 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Step four is Applications and odds. This is where you'll spend a lot of your time once you start applying.

[Point to the stage drop-down.] As things move, change the stage: phone screen, first interview, final round, offer, not selected, or withdrawn.

[Point to the big number.] This is Rose's estimate of your chance of an offer from where you are right now. [Point to the bars.] And each bar is your chance of clearing the next step.

These start from public hiring averages, where only about three percent of applicants reach an interview. Then they adjust for your fit, any referral, your practice scores and your debriefs.

[Point to Boost factors.] Boost factors tell you what would raise your odds, and by how much. Like getting a referral, or practicing in the Studio.

[Slow down.] These are estimates, not guarantees. Use them as a guide.

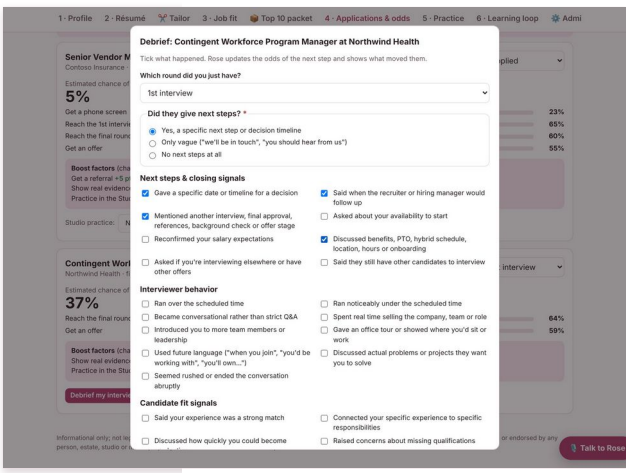

[Advance.]

4 Debrief: log each interview the same day

A specific next step or decision date tells you more than how friendly it felt.

1. Press Debrief my interview and choose the round
2. Answer Did they give next steps? (required)
3. Tick what happened in the four signal groups
4. Press Update my odds and read the final analysis

Done when: the debrief is logged and the follow-up is sent.

RECORDING SCRIPT · Slide 11 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

After every phone screen or interview, do a Debrief, ideally the same day while it's fresh.

Press Debrief my interview and choose the round.

[Point to the top question.] Then answer the one required question: did they give next steps?

[Pause.] Here's why that matters. A specific next step, or a decision date, is the strongest single signal there is. It tells you far more than whether the interviewer seemed friendly.

[Point to the checkboxes.] Then tick what happened, in four groups: closing signals, interviewer behavior, how well you fit, and what happened after the interview.

Press Update my odds. Rose shows how each signal moved your odds, and gives you a final analysis: your most likely stage, the evidence for and against, what's still unknown, and your recommended follow-up, like a thank-you note within twenty-four hours.

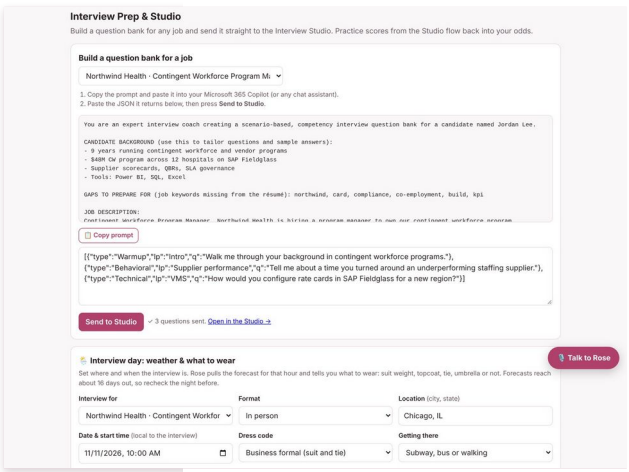

[Advance.]

5 Practice: build the question bank

Questions written from the job, your background and your gaps.

1. Pick a saved job, or press Prep in Studio on its card
2. Copy the prompt into your AI assistant
3. Paste its JSON and press Send to Studio
4. Practice scores flow back into your odds

Done when: each upcoming interview has a question bank in the Studio.

RECORDING SCRIPT · Slide 12 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

Step five is Practice, where you prepare for a specific interview.

[Point to the top section.] Pick the job, or press Prep in Studio on its card, and Rose writes a prompt from the job description, your background, and the gaps in your résumé.

Copy it into Copilot or any chat assistant, paste the questions it returns, and press Send to Studio.

[Point to the confirmation link.] Then click Open in the Studio to start rehearsing.

[Point to the bottom table.] Practice so far shows your scores from the Studio. And those scores feed straight back into your odds.

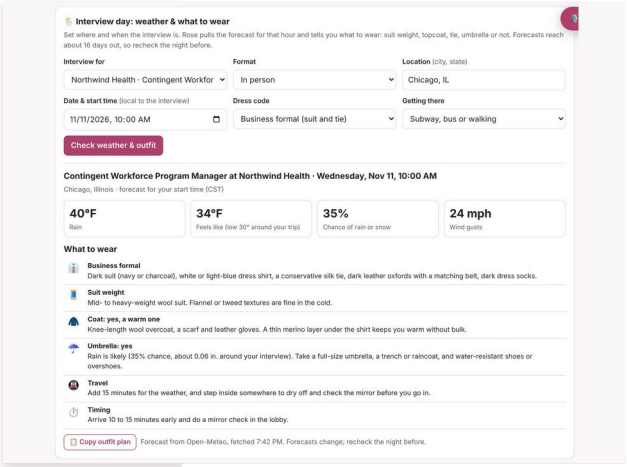

[Advance.]

Interview day: weather and what to wear

The forecast for your interview hour, turned into what to wear.

1. Pick the job, format and dress code
2. Enter the city, date and start time
3. Choose how you're getting there
4. Press Check weather & outfit; recheck the night before

Done when: your outfit plan is set the night before.

RECORDING SCRIPT · Slide 13 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

And this is a small touch people really like: interview-day weather, and what to wear.

[Point to the form.] Pick the job, whether it's in person or video, the city, the date and start time, the dress code, and how you're getting there.

Press Check weather and outfit.

[Point to the four boxes.] Rose pulls the forecast for that exact hour: temperature, how it feels, the chance of rain, and wind.

[Point to the list.] Then she tells you what to wear. Suit weight, whether you need a topcoat, whether to bring an umbrella, and how much extra travel time to allow.

[Pause.] Forecasts reach about sixteen days out, so check again the night before. One less thing to worry about on the big day.

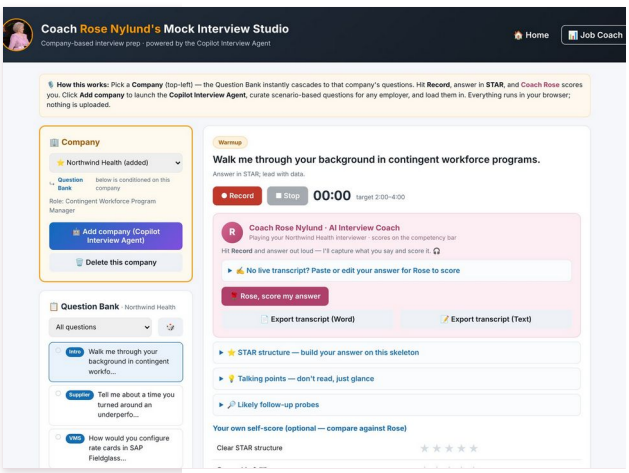

[Advance.]

5 Interview Studio: rehearse out loud

Answer in STAR form and get scored by Rose.

1. Open the Studio from Practice or the top button
2. Pick a question and press Record; aim for 2 to 4 minutes
3. Press Rose, score my answer, then add your self-score
4. Export a transcript to Word to review later

Done when: you've answered and scored at least 5 questions.

RECORDING SCRIPT · Slide 14 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

This is the Interview Studio, where you rehearse out loud.

[Point to the left panel.] It opens with your company selected and your questions listed on the left.

Pick a question, press Record, and answer out loud using STAR: Situation, Task, Action, Result. Aim for two to four minutes.

[Point to the scoring panel.] Press Stop, then press Rose, score my answer. She scores it and tells you what to improve. Add your own self-score too, and see how they compare.

Under each question you'll find a STAR outline, talking points, and the follow-up questions you're likely to get.

[Pause.] My advice: answer and score at least five questions before every interview. It's the fastest way to walk in confident.

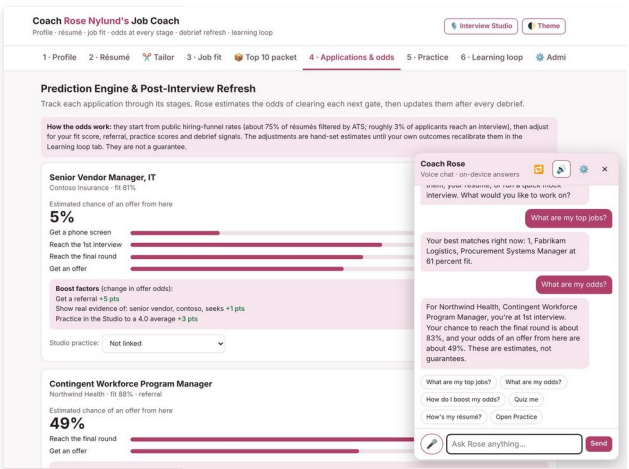

[Advance.]

Talk to Rose: ask your coach out loud

A voice chat with Rose, answered from your own saved jobs and odds.

1. Press the 🎙️ Talk to Rose button in Job Coach
2. Tap the mic and talk, or type
3. Try a chip: top jobs, odds, boost, résumé
4. Say Quiz me for a spoken mock interview

Done when: you've asked Rose about your odds and tried one quiz question.

RECORDING SCRIPT · Slide 15 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Now let me introduce you to Rose herself. This is Talk to Rose.

[Point to the button, bottom right of the Job Coach.] Press Talk to Rose on any tab, and a chat panel opens.

Tap the microphone and just talk to her, or type if you prefer. She answers out loud.

[Point to the chips.] Not sure what to ask? Tap one of these: What are my top jobs? What are my odds? How do I boost my odds? How's my résumé?

[Point to the answers.] She answers from your own saved jobs and odds, right here in your browser.

[Pause.] And here's my favorite. Say Quiz me, and Rose runs a spoken mock interview. She asks a question, you answer out loud, and she gives you quick STAR feedback.

[Point to the gear icon.] There's one optional extra. If you add your own Claude API key in settings, Rose can give open-ended coaching. That's paid by you, and your questions go to Anthropic when it's on. Without a key, everything stays on your device.

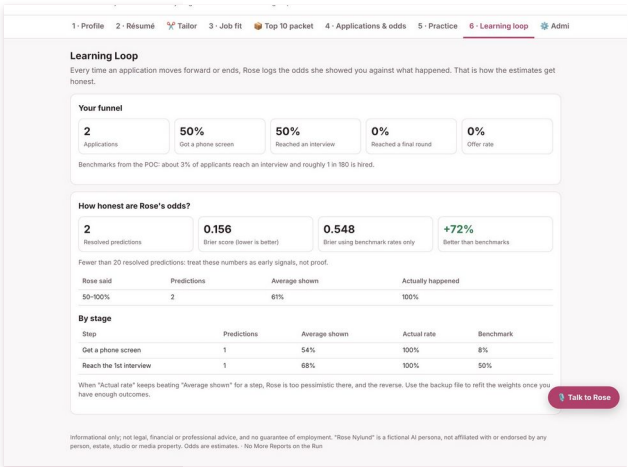

[Advance.]

6 Learning loop: how honest are the odds?

Nothing to fill in. Rose logs each estimate against what happened.

1. Read your funnel: phone screens, interviews, finals, offers
2. Compare with the benchmark line
3. Check the Brier score: lower is better
4. Under 20 outcomes, treat it as an early signal

Done when: closed applications are marked, and you review this monthly.

RECORDING SCRIPT · Slide 16 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

Step six is the Learning loop, and there's nothing to fill in here.

Every time an application moves forward or ends, Rose logs the odds she showed you against what actually happened.

[Point to the top row.] At the top is your funnel: how many of your applications got a phone screen, reached an interview, made a final round, and got an offer. Compare those with the benchmarks underneath.

[Point to the middle section.] Below that is how honest Rose's odds have been for you. The Brier score measures accuracy, and lower is better.

[Point to the bottom table.] The by-stage table shows where Rose has been too optimistic or too pessimistic.

[Pause.] With fewer than twenty outcomes, treat this as an early signal. And remember to mark closed applications, so they count. Check this page once a month to see where your search is dropping off.

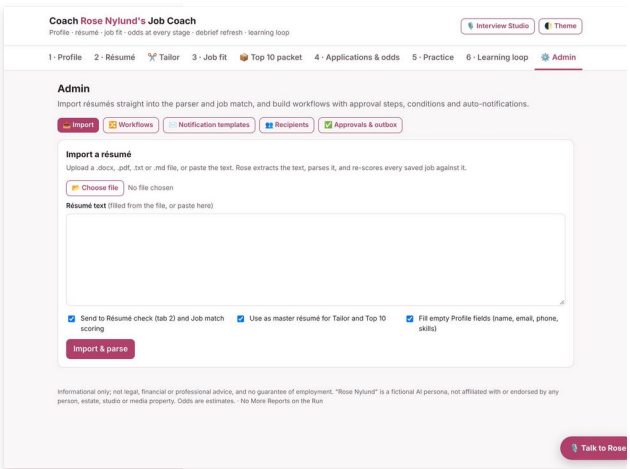

[Advance.]

Admin: import your résumé in one go

Load a .docx, .pdf, .txt or .md file into every tab at once.

1. Open Admin; Import shows first
2. Choose your résumé file or paste the text
3. Keep all three boxes ticked
4. Press Import & parse; every job is re-scored

Done when: your résumé is imported and Profile fields are filled.

RECORDING SCRIPT · Slide 17 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

Remember that shortcut I mentioned? Here it is. The Admin tab's Import panel is the fastest way to get started.

Choose your résumé file: Word, PDF, text or Markdown. Or just paste the text.

[Point to the three checkboxes.] Leave all three boxes ticked. That sends your résumé to the Résumé check and job scoring, makes it your master résumé for Tailor and the Top 10 packet, and fills in any empty Profile fields.

Press Import and parse, and every saved job is re-scored instantly.

[Point to the row of buttons.] The other Admin buttons are optional extras. They let you set up email reminders, for example to a career coach or mentor.

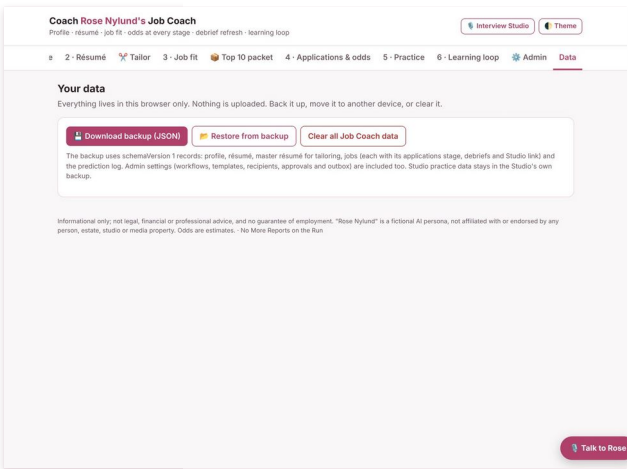

[Advance.]

Your data: back up, restore, start over

Your data lives only in this browser, so a backup is your safety net.

1. Download backup (JSON) weekly
2. Restore from backup on a new computer
3. Clear all data only to start over; it can't be undone
4. Back up Studio practice from the Studio itself

Done when: a backup is saved somewhere safe, such as OneDrive.

RECORDING SCRIPT · Slide 18 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

Because everything lives only in your browser, a backup is your safety net.

[Point to the first button.] Once a week, press Download backup. It saves everything: your profile, résumés, jobs, applications and debriefs, in one file. Keep it somewhere safe, like OneDrive.

[Point to the second button.] On a new computer, press Restore from backup and pick that file. You're right back where you left off.

[Point to the third button.] Clear all data is only for starting over. It asks you to confirm, and it can't be undone.

One last note: your Studio practice is saved separately, so back that up from the Studio with its own Download my data button.

[Advance.]

Your weekly rhythm

When	Do this	Tab
A posting you like	Save it and read its Job Fit Card	Job fit
Before each application	Tailor your résumé and pass Check it	Tailor
After you apply	Press I applied	Job fit
Once a week	Refresh your top 10 and save the packet	Top 10 packet
Interview booked	Build the question bank and practice	Practice, Studio
Same day as the interview	Debrief and send the follow-up	Applications
When you hear back	Update the stage	Applications
Once a week	Download a backup	Data
Once a month	Review your funnel	Learning loop
Any time	Ask Rose about your jobs and odds	Talk to Rose

RECORDING SCRIPT · Slide 19 of 20 · about 1.5 min
[Bracketed cues are actions, not words to read.]

So how do you put this all together? Here's the weekly rhythm.

[Move down the table as you speak.] When you find a posting you like, save it in Job fit and read its card.

Before each application, tailor your résumé and run Check it. After you apply, press I applied.

Once a week, refresh your top ten and save the packet.

When an interview is booked, build the question bank and practice in the Studio. Check the weather the night before.

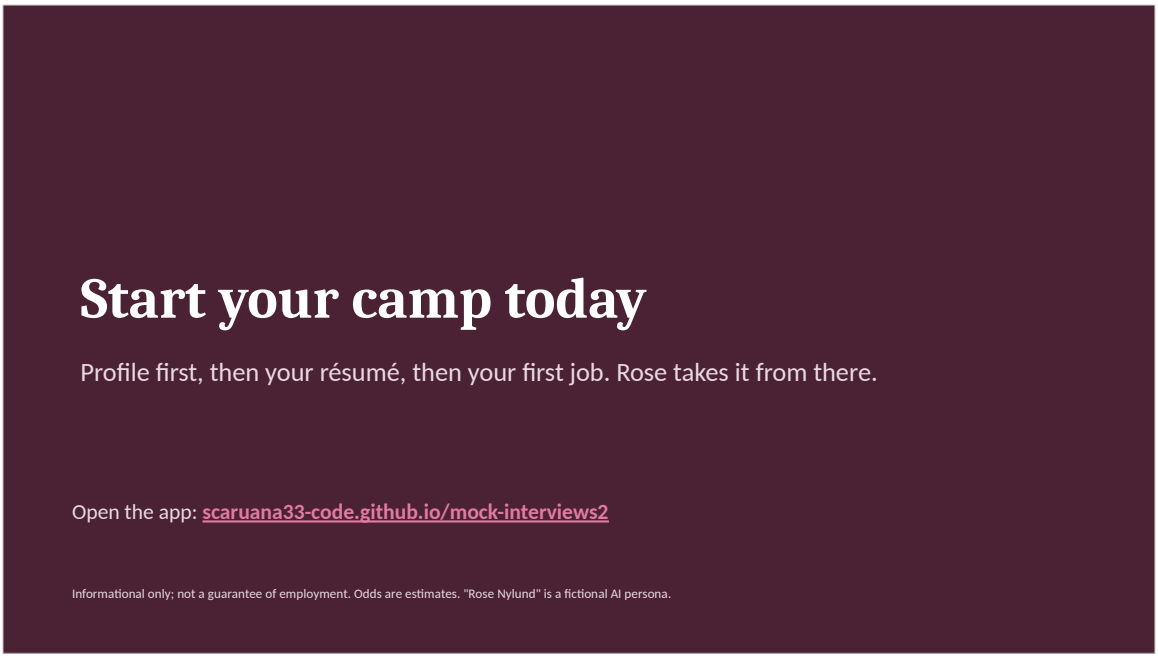

On the day of the interview, debrief, and send your follow-up.

When you hear back, update the stage.

Download a backup every week. And once a month, look at your Learning loop to see what to work on next. And any time you're unsure, just ask Rose.

[Pause.] That's it. A few minutes a day, and you'll always know where you stand.

[Advance.]

RECORDING SCRIPT · Slide 20 of 20 · about 1 min
[Bracketed cues are actions, not words to read.]

That's the Candidate-to-Offer Camp.

[Point to the link.] To get started, open the front door at the link on screen, and press Open Job Coach. Fill in your Profile, add your résumé, and save your first job. Rose takes it from there.

[Pause.]

Remember three things. It's free. Your data never leaves your browser. And a concrete next step from an employer tells you more than any gut feeling about how an interview went.

The odds are estimates, not guarantees, and Rose Nylund is a fictional AI coach.

[Smile.] Thanks for watching. If you try it, I'd love to hear what helped you most. Good luck turning candidate into offer.

[Hold for two seconds, then stop recording.]
